# **EXAMINER'S AMENDMENT & REASONS FOR ALLOWANCE**

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on February 25, 2009 has been entered. Claims 23 and 24 have been amended.

The current Examiner's amendment cancels claim 27 and amends claims 23 and 24. Claims 23-26 and 28-40 are allowed in the current application.

### Examiner's Amendment

Examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with applicant's representative Adrian L. Pishko on March 25, 2009.

Amendment to the claims:

Please cancel claim 27.

Please amend claims 23, 24 and 28 to read as follows:

Claim 28:

# Claim 23: A method comprising:

- (a) including in a lemon/lime flavored beverage an acidulant system consisting of (i) citric acid in an amount from about 0.18 to about 0.24 % by weight of the finished lemon/lime flavored beverage and (ii) adipic acid having a smaller dissociation constant than citric acid; and
- (b) increasing the pH of the lemon/lime flavored beverage by up to about 0.7 pH units until the beverage has a pH between about 3.2 and about 3.8 at the time of manufacture by including in the lemon/lime flavored beverage a buffer salt system consisting of a citrate salt and a phosphate salt, wherein the ratio by weight of said adipic acid: said citric acid is 1:15 to 1:3, and wherein for at least four weeks following manufacture the beverage is more tart and has a stronger lemon/lime taste than a beverage having the same amount of lemon flavoring and a pH of at least about 3.0 and without said ratio of acids.

# Claim 24: A method comprising:

- (a) including in a lemon/lime flavored beverage an acidulant system consisting of
  (i) a combination of phosphoric acid and citric acid and citric acid in an amount from
  about 0.18 to about 0.24 % by weight of the finished lemon/lime flavored beverage and
  (ii) adipic acid having a smaller dissociation constant than both phosphoric acid and
  citric acid; and
- (b) increasing the pH of the lemon/lime flavored beverage by up to about 0.7 pH units until the beverage has a pH between about 3.2 and about 3.8 at the time manufacture by including in the lemon/lime flavored beverage a buffer salt system consisting of a citrate salt and a phosphate salt, wherein the ratio by weight of said adipic acid: said phosphoric acid: said citric acid is 3.0-4.0:1.4-2.0:1.0, and wherein for up to seven months following manufacture the beverage is more tart and has a stronger lemon/lime flavor and taste than a beverage having the same amount of lemon flavoring and a pH of at least about 2.7 [3-0] and without said ratio of acids.

#### Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

Methods of making lemon-lime flavored beverages with citric, and phosphoric acids with adipic acid in the pH in the recited range have been known in the art (Braun US 4830862). Braun also teaches of addition of salts including citrate and phosphate salts (Column 5, lines 53-68) to the beverage compositions as instantly claimed (Column 8, line 58 and Column 9, lines 7-10, and Column 14, lines 10-15 and Column 6, lines 1-6). Braun is silent about the amount of adipic acid in a beverage and the relative proportions of the citric, adipic and phosphoric acids and also the proportion of citrate and phosphate salts and the relationship of the relative amount of acids to the strength and stability of lemon-lime taste stability of the beverages as claimed. The other closest prior art of record Nakel et al (US 4551342), teaches a formula wherein citric, phosphoric and malic acids and calculations to come up with stable beverage formulations. However, the calculations of Nakel were based on experimental results specific to Nakel. The equation disclosed by Nakel for determination of amount of acid component in the beverages (Column 8, Nakel) indicates that if the calculations fall within 9.6 and 12.1 the acid level of the beverage is acceptable as relied upon in the rejection. However, the applicants' have shown that there is no disclosure in Nakel that the malic acid can be substituted for adjoic acid (See applicant's remarks, 2/25/09. pages 7-8). Further the applicants' show by way of calculation that applicant's claimed beverages are acceptable and storage stable, but have values between 1.68 and 2.91 (Remarks, 2/25/09 page 9), which do not follow the calculation trend taught by Nakel. Thus, the applicants' have shown that there are innumerable possible combinations of types and amounts of edible acids and buffers possible and the examples of combinations in the cited art does not render every other combination obvious. Thus, claimed weight ratios of specific acids and buffer salts that have strong lemon-lime flavor at least four weeks after manufacture are not taught by combined teachings of

Application/Control Number: 10/628,420

Art Unit: 1794

Braun, VanNess, Lee and Nakel. Therefore, a method of a lemon/lime flavored beverage with an acidulant system consisting of citric acid in an amount from about 0.18 to about 0.24 % by weight of the finished lemon/lime flavored beverage and adipic acid with or without phosphoric acid, pH between 3.2 to 3.8, wherein the ratio by weight of said adipic acid: said citric acid is 1:15 to 1:3, and where the beverage with for at least four weeks following manufacture the beverage is more tart and has a stronger lemon/lime taste than a beverage having the same amount of lemon flavoring and a pH of at least about 3.0 and without said ratio of acids as recited in claim 23, as recited in the instantly claimed invention is free of the prior art. Similarly a lemon-lime beverage with acidulant with citric, phosphoric and adipic acid with above pH and flavor attributes and the ratio by weight of adipic acid: said phosphoric acid: said citric acid is 3.0-4.0: 1.4-2.0: 1.0, and wherein for up to seven months following manufacture the beverage is more tart and has a stronger lemon/lime flavor and taste than a beverage having the same amount of lemon and cola flavoring and a pH of at least about 2.7 and without said ratio of acids in the instantly claimed invention (Claim 24) was not obvious over prior art and is free of the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
